

Introducing the ATII Darkweb Intelligence Platform

Project Hades

Delivering Darknet Secrets

Law enforcement, financial institutions, and corporations do not need to expose themselves to unnecessary security risks by accessing the Darkweb directly while conducting investigations to locate digital fingerprints.

ATII offers various licensing options to best fit your organization and needs.

See back for more details.

We Do This

So That

You Can Do This

Scrape darweb sites for:

- ▶ IP & Email Addresses
- ▶ Keywords & Meta Data
- ▶ Etags, Favicons, Javascript
- ▶ Google Analytics ID's
- ▶ SSH Keys, PGP Keys
- ▶ Cryptocurrency Address
- ▶ Images Hades, EXIF Data

- ▶ Search for Threats
- ▶ Perform Investigations
- ▶ Filter & Pivot Through Queries
- ▶ Perform Risk & Link Analysis
- ▶ Map Out Criminal Networks
- ▶ Deanonymize the Darkweb

www.FollowMoneyFightSlavery.org

Project Hades reduces the risk and exposure to illegal content to keep your staff safe by using a multi-layered, proactive approach to investigations that provides full, real-time visibility into the Darkweb.

Project Hades is a collaborative platform that allows the users to work together on cases, tag evidence and enter in notes for deconfliction.

Financial institutions can no longer ignore the links to financial crime on the darkweb. We would love to give you and your team a demo to show you its capabilities (which includes understanding your organization and your clients' reputational risk on the dark-web).

LICENSE OPTIONS	PRICING			
Hades Console*	\$5,000			
Queries >>	1,000	2,500	5,000	10,000
 MALTEGO Transform*	\$2,500	\$5,000	\$7,500	\$10,000
API Calls	\$2,500	\$5,000	\$7,500	\$10,000

*Discount available with multiple license purchases

“The Attribution and Investigations teams at CipherTrace appreciate Project Hades vast array of indexed data from onion sites. The scraped onion site data provides the title of the sites as well as categories and keyword analysis. Investigations uses Project Hades data to identify crypto addresses which may be re-used ie. multiple sites/scams using one BTC address. This provides CipherTrace with critical insights on relationships between entities and scam types, and any potential connections to CSAM/sexploitation.”

Jonelle Still, Cryptocurrency Forensics Analyst
